

Press release

HYPOXI® is pleased to announce a new location in Küsnacht, Switzerland.

Wals-Siezenheim, June 2020

Andreas Friedli opened his HYPOXI®-Studio in Küsnacht, Switzerland, on the 28th of May this year and offers the HYPOXI-Method® in his practice specialising in massage. An added value for every customer is the possibility to use the services of an experienced masseur in addition to the targeted figure-shaping using the HYPOXI-Method.®

Andreas Friedli had been 'toying' with the idea, for some time to offer HYPOXI®. After a room became free in his practice, everything quickly took shape. Despite stricter corona entry regulations, the delivery of the devices went surprisingly well.

Mr. Friedli was trained by our Master-Trainer Yvonne Koch to offer not only the classic HYPOXI® intensive and maintenance programs but also the specific HYPOXI-Training® for those suffering from lipoedema.

Together with Mr. Friedli, we are pleased that there is now the possibility to use the HYPOXI-Method® on the beautiful Lake Zurich.

Andreas Friedli

The HYPOXI® devices at a glance:

HYPOXI-Trainer® S120

The S120 combines the three components of HYPOXI-Method® effectively: The computer-controlled alternation of high and low pressure takes place in a chamber that reaches up to the hips. The gentle exercise takes place sitting on the integrated bicycle ergometer. This puts the problem areas – hip, underbelly, buttocks and legs - under pressure, facilitates the activity of the veins and eliminates fat in a targeted manner.

HYPOXI-Trainer® L250

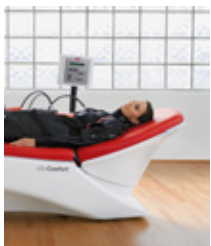

The L250 permits the alternating application of low-pressure for the underbelly, hip, behind and legs. The comfortable reclined position relieves the body of most of its weight during training and promotes the elimination of liquids and toxins. The results are beautiful, slender legs and a visible reduction of cellulite.

HYPOXI-Vacunaut®

The Vacunaut is used to reduce the girth of the stomach and hips. Training is performed in the HYPOXI®-PressureSuit with an integrated network of 122 high and low pressure chambers.

During moderate exercise - which can take place on a treadmill, exercise bicycle or other popular cardiovascular exercise equipment - the application of high and low pressure targets the abdomen and hips.

HYPOXI® HD-Comfort

In order to remain firm and strong the skin needs special treatments. 400 active vacuum chambers integrated in the problem areas in HYPOXI® HD-PressureSuit ensure that the skin gets the exercise it needs. A comfortable lounge chair with integrated high and low-pressure technology ensures pleasant relaxation while the elastic connective fibres of the skin work diligently to achieve smooth, firm skin.
